Check-to-Mail™

S o f t w a r e   f o r   M i c r o s o f t   W i n d o w s

Eliminate the hassle of signing, folding, stuffing and sealing checks by hand!

Introducing Check-to-Mail™ for Windows! That's right, this exciting solution is an add-on to the *ptm document systems*' PrintChef software which offers the full capability to convert **any** check printing software standard outputs into proper Print to Mail™ format for pressure seal documents. Check-to-Mail™ will extract the output from printed pages sent to PrintChef by your check printing software and rearrange that output according to "*print recipes*" to create the desired look for any project. You do not have to change the layout from your software to use the Print to Mail™ System.

When it comes to printing payroll checks, direct deposit notices, accounts payable checks, or W-2 forms on pressure seal documents Check-to-Mail is the perfect solution. **You** choose how much of the document you want to print with your laster printer: only variable data; variable data with a signature; with MICR; any combination of these items, or all the items include your logo, bank information and ABA Fraction.

Check-to-Mail™ Basics

Includes graphics and correct placement of printed data on pressure seal forms. Choose one from Payroll/Direct Deposit or Accounts Payable applications.
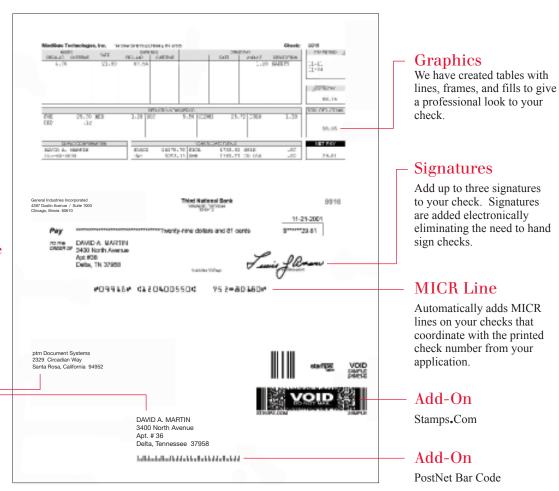

Check-to-Mail™ Plus

Basics package plus the ability to add MICR line, electronic signatures, and check printing security.

Check-to-Mail™ Complete

Plus package with both Payroll/ Direct Deposit and Account Payable applications. The most comprehensive package.

Print Compatibility

Places the print such as the return and outgoing address in the correct area on a pressure seal form. Also allows for the creation of a return address, logo(s) or Postal Indicia.

Graphics

We have created tables with lines, frames, and fills to give a professional look to your check.

Signatures

Add up to three signatures to your check. Signatures are added electronically eliminating the need to hand sign checks.

MICR Line

Automatically adds MICR lines on your checks that coordinate with the printed check number from your application.

Add-On

Stamps.Com

Add-On

PostNet Bar Code

Kits contain Payroll checks, Direct Deposit Notices, Accounts Payable Checks, W-2 forms (*additional charge* **).**

Kits available for most Popular Check Printing softwares such as: QuickBooks, MAS 90, Best, Great Plains, Peachtree, Solomon, Timberline, Maxwell, AccPac, etc.

Check-to-Mail™

Components & Add-on's for Check-to-Mail™

PrintChef : This program is the hub of the *ptm document systems*' Print to Mail™ printing system. It is compatible with Windows 95/98, ME, NT4, 2000, and XP, and works with every application and every printer. PrintChef turns any "*raw*" printed output into professional looking documents. You need PrintChef to run any of the add-on programs or plug-ins. Simply put, PrintChef is a print management system.

re:Format : Brings UNIX, IBM, VAX and other mainframe operating system outputs into PrintChef.

Recipes : The integration of all the components, plug-ins, and add-ons to provide the final layout of the print output from a particular application program. For example... placing all graphics, variable data, signatures, MICR, address, postal indicias, etc. in the correct place on a document to match the original application output.

Check-to-Mail™ : This package manages the extraction of the return address or creates static ones; it allows the user to add a logo. Check-to-Mail™ will "*remap*" or copy data to other parts of a form. IT creates tables with lines. Frames, and fills to give a professional look to your output.

Signatures : A standard feature of both Check-to-Mail™ Plus and Complete packages - creates signature blocks with up to 3- signatures on a check. May also be used to add signatures to any letter.

MICR Line : A standard feature of the Check-to-Mail™ Plus and Complete packages - creates MICR lines on a check, which will coordinate with the printed check number from your application.

PostNet BarCode : This add-on will create bar codes from the printed output of the application address. The software scans the address and if your software is capable of printing a 9-digit zip code or delivery point zip, you can receive postal discounts.

Stamps.com : This add-on will create fixed or dynamic postal indicias, or generate internet postage automatically.

ClearPassage : This add-on will refeed hand-signed check forms into the folder-sealer *via* the printer without printing on the document.

JobSplitter : This add-on will split a print into two jobs: for example one for a single-page prints, one for two-page prints that will layout the two pages turned side-by-side. (*Requires appropriate forms.*) Another example would be when a check over a certain amount must be hand signed. The JobSplitter will read the parameters and separate the documents accordingly.

W-2 Recipe : This add-on will print one entire W-2 onto a blank pressure seal form.

With Check-to-Mail™ and Print to Mail™ the process is as easy as 1-2-3!
